

Summary of the round table 1 – Cultural practices in the vineyard

We presented a series of cultural practices for the management of GTDs in the vineyard

It was agreed that a question in order to understand the level of knowledge on GTDs in each country and in each region should be added. A general term depending on the country (i.e. maladies du bois, malattie del legno...) should be also defined

As for the nursery, the questionnaire will be anonymous. Anyway, general information on size, varieties and farming (traditional, organic, biodynamic...) should be given

Practices have been organized in sections

Each cultural practice has been discussed. It was agreed to leave an open space per group of questions

We have the intention to translate the procol into other languages and distribute to viticulturists through each MC member

Professional organizations, magazines and journals can be involved in order to reach as many viticulturists as possible

The possibility to publish the questionnaire on line on the COST Action web will be taken into account
